Career highlights

- 30+ years of experience leading design and digital experience across agencies, consultancies, and enterprises.
- 7 years at JPMorgan Chase delivering strategically important enterprise products.
- Defined experience strategy for products supporting over 330,000 global employees.
- Led experience strategy for engineering products serving 60,000+ developers and engineers.
- Collaborated with MD's, ED's and cross-functional leadership teams to shape enterprise initiatives.
- Facilitated strategic discovery workshops that aligned business, product, engineering, and design stakeholders.
- Delivered business intelligence, digital workplace, and employee experience products with measurable adoption and engagement.

Executive profile

Strategic design leader with over 30 years' experience shaping enterprise products, employee experiences and digital transformation across global organisations. Over the last seven years at JPMorgan Chase, I have defined enterprise experience strategy for products supporting a global technology organisation of more than 60,000 technologists and an employee population exceeding 330,000.

I specialise in simplifying organisational complexity by combining experience strategy, product thinking, service design, and evidence-led decision making to deliver enterprise products with measurable improvements in engagement, adoption, and user satisfaction. My approach brings together discovery, stakeholder alignment, research, analytics, and design governance to create scalable, user-centred experiences that balance business objectives with technical feasibility.

In addition to defining product strategy, I built and led a high-performing multidisciplinary team of eight UX designers, UI designers, and researchers, recruiting five members of the team and establishing the design capability responsible for delivering strategic employee experience products. I have coached designers, developed careers, championed design quality through mentoring and critique, and helped embed collaborative, user-centred practices across multidisciplinary product teams.

I am recognised as a trusted strategic partner to executive stakeholders across Product, Engineering, HR, Communications, and Business functions, influencing organisational direction through facilitation, insight, and design leadership. My focus is on building high-performing teams, raising design maturity, and delivering enterprise experiences that create lasting value for both organisations and the people who use them.

Employment history

JPMorgan Chase & Co. - Employee Experience Lead, Employee Channels

2021 - Present

Lead experience strategy for enterprise employee products supporting a global workforce of more than 330,000 employees. Working in partnership with Product, Engineering, and senior business stakeholders, I define end-to-end experience strategies that improve how employees discover information, access services, and collaborate across the organisation.

Responsible for shaping strategically important digital workplace products, translating complex business requirements into intuitive, scalable experiences that balance user needs, organisational priorities, and technical constraints. Regularly facilitate discovery workshops, align cross-functional stakeholders, and influence decision-making through user insight, design thinking, and evidence-based recommendations.

Selected strategic products

- Defined the experience strategy for the firm's corporate intranet, transforming the primary digital workplace experience for employees worldwide.
 - Built and led a multidisciplinary design team over three years, establishing the capability responsible for delivering strategic employee experience products before transitioning into a centralised design organisation following a wider organisational restructure.
 - Contributed to a platform generating more than 2.2 million page views and 745,000+ page interactions, demonstrating high levels of employee engagement across the organisation.
 - Helped deliver an employee experience recognised with 61% positive usefulness scores, using research, analytics, and continuous iteration to improve adoption and usability.
- Led experience strategy for enterprise search, employee directory, and benefits experiences, simplifying how more than 330,000 employees discover information, services, and colleagues.
- Partnered with Managing Directors, Executive Directors, and cross-functional leadership teams to define experience strategy for high-profile initiatives, facilitating workshops that aligned business priorities, user needs, and technical delivery.
- Applied user research, behavioural analytics, and measurable outcomes to guide design decisions, ensuring products delivered tangible value for employees and the business.

JPMorgan Chase & Co. - Experience Design Strategy Lead, Corporate Technology

2019 - 2022

Defined experience strategy for enterprise technology products supporting a global engineering organisation of more than over 60,000 developers and engineers. Partnered with Product Managers, Engineering, and senior technology leaders to deliver digital products that improved engineering productivity, operational visibility, and strategic decision-making.

Key achievements

- Led the experience strategy for Gaia Portal, a strategic business intelligence platform providing engineering leadership with visibility into application ownership, Private Cloud infrastructure costs, and operational metrics.
 - The platform became the primary interface for engineering insights, supporting over 5,200 weekly users, achieving 81.7% customer satisfaction, and providing visibility across the majority of internally developed applications built on the firm's Gaia Application Platform and Kubernetes Platform.
 - Delivered a product adopted by more than 5,200 weekly active users, achieving 81.7% customer satisfaction through iterative, evidence-led design.
 - Helped consolidate engineering data, tools, and services into intuitive digital experiences supporting thousands of internally hosted applications and technology assets.
- Worked closely with Product and Engineering to balance user needs, business priorities, and technical constraints throughout the product lifecycle.
- Influenced strategic product decisions through discovery workshops, user research, information architecture, and experience strategy.
- Built trusted relationships with senior technology stakeholders, acting as a strategic design partner on programmes delivering measurable improvements to engineering productivity and operational transparency.
- Delivered products with measurable adoption and engagement, helping engineering teams work more efficiently while improving the overall developer experience.

Selected consultancy & agency experience

Built a successful 23-year career across digital design, UX, branding, and product design, delivering projects for clients spanning financial services, media, public sector, telecommunications, and consumer brands. I have successfully designed, managed, and delivered time-sensitive, complex projects for clients across digital, web, and print – including applications, e-learning, mobile, responsive web, and rich internet applications.

Progressively evolved from a design practitioner to a strategic design leader, combining creative thinking with business strategy and digital transformation.

Roles

- HCL Technologies UK – Design Manager: 2018 – 2019
- Moriarti Design & Marketing – Design & Digital Director: 2009 – 2018
- WeeWorld – Senior Lead Designer: 2008 – 2009
- Moriarti – Senior Designer: 2006 – 2008
- Laveron – Senior Designer: 2004 – 2006
- BoB Marketing / Multiply UK: 2003 – 2004
